Course Description

Course no	Course name	Prerequisite
1505101	Programming in Python	1501110

This course is intended for students with previous programming experiences as introductory course. Students will gain the basic knowledge and experience to solve simple programming problems using different Python packages. The course is designed to provide Basic knowledge of Python. The practical work associated with the course enables students to learn how to edit, compile, run, and test programs that cover all aspects of the Python language addressed in lectures. Through the tutorial system, they are also given practice in evaluating and implementing designs produced by others. The Project is designed to enhance the students' teamwork skills and to further develop their interpersonal and communication skills.
